

Government and Public Health Solutions

ICON Government and Public Health Solutions (GPHS) (formerly ClinicalRM) provides full service clinical development and staffing services across multiple agencies in the US Government, and is a trusted partner to both multinational public health organizations, and global Non Government Organisations (NGOs).

US Federal Research

ICON Government and Public Health Solutions have over 25 years experience of contracting with US Federal agencies including the Department of Defense (DoD), Defense Health Agency (DHA), Veteran Service Integrated Networks (VISN), Walter Reed Army Institute of Research (WRAIR), Biomedical Advanced Research and Development Authority (BARDA), Centers for Disease Control and Prevention (CDC), NIAID/DMID and Food and Drug Administration (FDA).

Our expertise extends across basic and applied research, infectious and neglected tropical diseases, oncology, vaccines development and testing and the response to biothreats.

Public Sector Health

ICON Government and Public Health Solutions have extensive experience working with multi-national public health organizations and global NGOs, and are a qualified provider for the Bill and Melinda Gates Foundation. Our broad portfolio of services and global footprint also serve the needs of other Global Health organizations such as Wellcome Trust, Global Fund and CEPI.

Global Clinical Operations

ICON GPHS provides the full portfolio of ICON services needed to conduct GCP-compliant clinical trials, including study design and protocol development, regulatory consultations and submissions, site selection, data management, clinical monitoring, quality assurance, medical writing, and staff training. Our clinical research and regulatory operations for Phase I-IV trials have historically primarily focused in the US and Africa, but as part of ICON's global footprint, we can manage operations for trials of any size, location, and indication.

On-site Professional Staffing

Today, over 400 ICON GPHS employees currently staff US Government laboratories, GMP manufacturing facilities, clinical trials centers, biomedical research laboratories, and regulatory affairs offices, all serving the mission of generating new and safe medical products. These employees have participated in the conduct of more than 200 government-sponsored clinical trials for more than 60 investigational products for a wide range of diseases.

We offer staffing solutions across all aspects of clinical research and medical product development for federal and commercial clients.

Strategic Consulting

Through our work in the military research corridor and alliances with world-class university researchers at Case Western, UNC, SUNY Upstate, and others, we have established a strong network of consulting physicians and scientists with expertise in clinical research. This collaborative effort developed into our Medical Experts Office, which now offers consulting services for clinical trial design, regulatory strategy, and all aspects of medical product development. Additional strategic consulting services are offered by members with decades of experience in biotech and pharma, as well as government research centers.

Navigating the complex landscape of clinical research in Sub-Saharan Africa

More than 20 years ago, we began working with the US Army in Kenya to aid in development of treatments and preventions for malaria. Building on that platform, we continue to participate in clinical trial operations, and training to support disease surveillance, for the US government, NGOs, and Biopharma.

With offices in key locations in West Africa, and our network of accredited laboratories, clinical research sites and strategic partners throughout Sub-Saharan Africa, ICON can provide staff on the ground, providing rapid site selection, initiation, and staff training and patient enrolment in a total of 24 African countries.

We provide logistical support including:

- Import and export of supplies and investigational products
- Laboratory construction and annotated biological sample repositories
- Medical transport (incl. ground and air support) and mobile labs
- Equipment, power generation, cold storage

Our experience in Africa includes more than 10,000 patients in GCP compliant Phase I-IV clinical trials, conducted in more than 20 African countries, with focus on infectious diseases, sickle-cell anemia, and oncology.

Our longstanding relationships within sub-Saharan Africa uniquely positioned us to be among the only CRO service providers on the ground in the 2014 Ebola hot zone. Our work related to Ebola Virus Disease (EVD) continues with longitudinal studies of EVD survivors and their communities.
